

# Bio Boost

BIOLOGICAL TREATMENT FOR SEPTIC TANKS

Introducing one of the most effective Septic Tank additives available!

Bio Boost's powerful formula works in harmony with the tank's natural bacteria to prevent crusting and blockages from forming. This not only helps minimise odours but also helps to reduce costly system failures.

Incredibly simple to use and economical, Bio Boost can be applied directly to the toilet bowl and on average 2L will last a family of 4 up to a year!

Bio Boost is so effective it will even degrade toilet paper in 4-5 days!

#### How to Use:

- Initially add 300ml directly to the toilet bowl and flush.
- Afterwards, add 100ml monthly

Do not use bleach based products with Bio Boost as they will affect its performance - we recommend the use of Bio Clean and Bio TCD.

#### PACKAGING

1L containers
